## Express Rates Reduced 25%

Transportation charges in the past were high, which added greatly to the cost of the plants purchased. Due to the continuous efforts of the nurserymen, the Express Company this year reduced their rates fully 25%. We consider this a nice reduction in transportation charges. This together with low cost of merchandise is of mutual interest. Our customers therefore, need not have the fear of transportation charges being out of reason. We also wish to thank the co-operation of the Express Company.

In every case, shipments will go forward as quickly as possible if so desired, or reserved for shipment in proper time for plantings in your districts. The first of March we start shipping into the Southern States, following up with our shipments in the later Spring seasons to our mid-western and eastern states. This part we watch very closely. It is our aim to ship you the plants, when it is planting time in your locality. Our railroad connections are of the very best, being able to route through our terminals immediately when shipments are received by the railroad. Perennials are of perishable nature and should be shipped by express, unless the material is of extra heavy nature and in perfect dormant stage at the time of shipment.

### *Method of Packing*

This part of the work is very important. In every case the perennials must be packed according to its nature. Therefore our packing is handled by our most experienced men. They are fully acquainted with all varieties of plants that we grow and pack accordingly. In the large volume of business annually, we receive only an occasional complaint on shipments being received, either heated in transit or improperly packed. In following up these complaints, we find in many cases that such shipments are either delayed in transit or traveling through unfavorable weather conditions. This, however, is so trifling when taking into consideration our thousands of shipments that our packing methods are as perfect as possible. In the event of plants arriving in unsatisfactory condition, we are ready at all times to cover such plants with replacement or refund of price paid.

## ACHILLEA

Milfoil or Yarrow

**A**CHILLEAS are of easy culture and grow in any good garden soil, preferring sunny locations. They are useful for the border, wild garden or shrubbery. For cutting there are many outstanding flowers among the Achilleas for summer floral pieces. In late years it has come to our attention that Achilleas are used in many floral pieces, due to the fact that when a planting of these are maintained and the flowers used continuously they are practically ever-bloomers. Anytime throughout the summer the florist can cut Achilleas for use as fillers. They are very valuable when the Gypsophila or Baby's Breath is off crop.

**BOULE DE NEIGE.** (Ball of Snow) An improvement on the Pearl. Wonderful for cut Flowers or garden. Blooms in June. A good filler, grows 12-15" high, double white flowers in umbels.

**FILIPENDULINA.** This fine plant from the shores of the Caspian Sea grows 2 to 3 feet high, flowers bright yellow, in flat heads, and with lace-like foliage. June to September. Nice to plant among shrubbery, evergreens, or for back border, also a good flower for basket work.

**AQUILEGIA OR COLUMBINE**

THE Columbines are among the most elegant and beautiful hardy plants, producing their graceful spurred flowers on stems rising two feet or more above the beautifully divided foliage and should be planted wherever their presence will serve to lighten up a too stiff and formal planting, for no other plant has so airy a grace as the Columbine, is more generous of its blooms, or more effectively adapted for cut flowers. Taken as a whole they are the most important part of the hardy garden and should be grown in quantity by every lover of old fashioned garden flowers. The following varieties are all suitable for cutting and are attractive when used with other flowers.

## AQUILEGIAS (Continued)

	Per 10	Per 100		10 Per	100 Per
<b>MARTIN'S SUPERB PINK.</b> This strain of pink Aquilegia without a doubt is one of the finest pink strain in cultivation. The plants grow to a uniform height. The flowers are of the most delicate shades of pink mostly of silvery tints. Several years ago we purchased in this country what was known as the best pink Aquilegia. Growing this strain all these years, we have continually worked it. By roguing out what in our opinion was not up to our ideal of excellence, we feel that at this time, we have this strain developed to a very high standard. We have every reason to believe it will be one of the most admired plants in your planting.	1.00	7.00	<b>LACTIFLORA.</b> An excellent hardy border plant, producing large, branching panicles of sweet scented, creamy white flowers, excellent for cutting. Three to four feet. August-September. A perennial you should have on hand for bouquets.	.85	6.00
<b>MRS. SCOTT ELLIOTT HYBRIDS.</b> There is not a better mixture grown in the world. Wonderful colors and color combinations, with very long spurred flowers. Its bright silver-colored stems and foliage are of great value as a filler for bouquets, sprays, baskets, or all sorts of floral pieces. By cutting and drying the stems it is very valuable in the winter for filler. Florists in our districts paid high prices for their supplies last winter. It is a showy plant in the perennial border or among shrubbery. Height 30 inches. We supply large field grown clumps. When used in basket work with colored roses the effect is a feast for the eyes.	.85	6.00
<b>RAINBOW STRAIN.</b> This strain was improved considerably in Colorado. In this climate the Aquilegia developed to perfection, being the home state for good many of the varieties now in cultivation. The originators of the Rainbow Strain mention very clearly this strain covers all the colors of the rainbow. The type of flowers are far superior to the Aquilegia in cultivation in their home state. Our plants are produced from the originator's seeds.	1.50	10.00	<b>STELLERIANA, (Old Woman).</b> Deeply cut silvery white foliage. Much used in carpet bedding. 18 inches.	.85	6.00

The branched stalks are more than twice the size of Incana, the main stems twice as stout. For these reasons Dumosa is a highly valuable new variety. Height 20 inches. # Erica or Calluna - Heather

Will grow best in shady or semi-shady locations. They require the same kind of soil as you would use for Rhododendrons or Hardy Azaleas. The first winter after planting they should have a little protection with a slight covering of straw. After that they are hardy. The Ericas are very pretty in summer and winter, having nice wiry stems with artistic foliage. After the first year the branches are covered with delicate little flowers.

We have large quantities of all varieties listed in 3 in. pots. These plants will readily transplant and will make a quick growth. For the reason that our plants are hardened off, we believe they can be planted this fall and will stand the winter. However, if you do not care to make fall plantings, we will be very glad to receive your orders any time between now and next spring and will make reservations for you for spring shipment.

We believe our assortment is the very best. The last few years we have selected these plants in various nurseries. Therefore, we are sure that we have an outstanding assortment. Our prices are also very reasonable. Accordingly, if you have not grown these in the past, we advise that you make purchases at this time. These plants are very interesting.
